

SCAMPER Architecture Review AI Cluster

Four voices. Seven lenses. Two rounds of adversarial stress-testing.

DATE 2026-03-24	LENSES All 7 SCAMPER
ROUNDS 2 (Opening + Full Rebuttal)	PARTICIPANTS The Architect · Cautious Transformer · Craft Guardian · Untethered Pioneer
OVERALL VERDICT 4× Redesign · 2× Holds · 1× Stress Point	THESIS STATUS Sound. Implementation more protective than thesis requires.

SHARPEST INSIGHT — SESSION FINDING

”The Override Log is load-bearing and may not be carrying the weight the architecture assumes.”

— Synthesis, S lens · Confirmed by all four voices in Round 2

- Substitute: Stress Point

Combine: Holds

Adapt: Redesign

Modify: Redesign

Other Uses: Holds

Eliminate: Redesign

Reverse: Redesign

Four Voices — Round 1 → Final Votes

ARCHITECT

Sara's AI Proxy

Protects the identity gap framing. Won't let design slide into tool adoption. Tends to solve design problems with tighter versions of existing mechanisms.

Blind spot: Assumes structure creates readiness.

R1: Compress + Rename →

Final: Same + accepts J→C gap

CHANGED

CAUTIOUS TRANSFORMER

The Safety-Seeker

Uses AI daily. Knows "faster content" isn't enough but doesn't know what enough looks like. Conflates comfort with competence. Needs visible safety structure.

Blind spot: Calls delay "safety."

R1: Keep 2-week Efficiency →

Final: Compress + cut Week 9 stmt

CHANGED

CRAFT GUARDIAN

The Standards Keeper

Value is judgment, taste, and process. Overrides AI constantly. Challenges anything that flattens expertise into a prompt. Precise and quality-focused.

Blind spot: Craft as shield against examining what AI has already replaced.

R1: Rename + Critique format →

Final: Same + endorses pre-work log

PARTIAL

UNTETHERED PIONEER

The Impatient Challenger

Efficiency and judgment are table stakes. Asks "why not?" more than "how?" Pushes the design to be bolder. Forgets that comfort with ambiguity is the exception.

Blind spot: Dismisses friction as resistance.

R1: Start with Capability →

Final: Test 1 cohort; form matters

PARTIAL

VOTE TRACKER

Decision by Lens

LENS	DECISION ON TABLE	CONSENSUS	VERDICT
Substitute	Rename layers → Surface/Standard/Original Work	4/4 on rename. Override Log as practice = contested.	STRESS POINT
Combine	Week 1 + Week 9 paired; Closing Expo from Override Log	3/4 on pairing. Expo form vs. raw log = partially resolved.	HOLDS
Adapt	Judgment layer redesigned as structured critique	Guardian's critique format carried. Practitioner review supported.	REDESIGN
Modify	Deepen Judgment before modifying anything else	All four converge on Judgment as hinge. Expo scope shrunk.	REDESIGN
Put to Other Uses	Closing Expo → pipeline to next cohort's Opening Expo	Guardian's alumni pipeline = strongest idea. Activate first.	HOLDS
Eliminate	Efficiency → 1 session; Week 9 statement removed	3/4 on both. Transformer changed position in Round 2.	REDESIGN
Reverse	Pre-work Override Log + Expo arc reversed (struggle first)	Architect's pre-work log + Guardian's arc reversal = unanimous. Full arc reversal = 1 cohort test.	REDESIGN

UNANIMOUS AGREEMENT

Where All Four Voices Converged

1 Judgment is the hinge

Under-designed. Every other disagreement is downstream of whether Judgment does its job. Fix this before everything else.

2 Efficiency → 1 session

Two weeks is convention, not conviction. One session: name the ceiling, show the trap, leave. The reclaimed time goes to Judgment.

3 Pre-work Override Log before Opening Expo

Seven days, one prompt, unframed. Participants arrive with a data set. The Expo hits differently against a self-established baseline.

4 Expo arc reversed (struggle before success)

Lead with the moment before the thing clicked, not the destination. Costs nothing. Changes how the ceiling lands.

5 Rename the layers

"Surface Work / Standard Work / Original Work" replaces Efficiency / Judgment / Capability. "Efficiency" is a management word that validates what participants came to move past.

UNRESOLVED FRICTION

Key Tensions

Protection vs. Disruption — Every Lens

The Transformer interpreted every design friction as a safety gap. The Pioneer interpreted every safety mechanism as a design compromise. The Architect's reframe was most useful: safety-vs-delay, not safety-vs-no-safety. Whether the architecture creates productive discomfort or just defers it remains unresolved.

Unresolved

Form vs. Rawness — Closing Expo

Pioneer: presentation format protects people from saying the actual thing. Guardian: form is what makes difficult content transmittable. Unmediated exposure produces self-protection, not revelation. Pioneer conceded "curated, staged, read aloud" is itself a form.

Partially Resolved

Structural Iteration vs. Disruption Assumption

The Architect's solutions are consistently tighter versions of existing mechanisms. The Pioneer's challenge: the architecture assumes good design produces identity transition — it doesn't. The identity shift requires disruption the architecture keeps smoothing over at the last moment.

Unresolved

Week 9 Identity Statement — Keep or Cut

Pioneer: a deliverable that makes people optimize for product rather than discovery. Transformer changed position in Round 2. The Closing Expo IS the identity statement — demonstrated, not declared.

Resolved — Eliminate (3/4 vote)

Rebuttal Positions — Key Extracts

The Architect DISAGREES MOST WITH: CAUTIOUS TRANSFORMER

The Transformer's argument reduces to a single move across all seven lenses: protect the container. The anxiety in the first week of an Override Log is the work. You can build a container that holds difficulty without removing the difficulty. Safety-vs-delay and safety-vs-no-safety are not the same thing.

Concedes: the Judgment-to-Capability gap is real. The Transformer identified it correctly. The bridge needs designing, not dismissing as a Judgment sequencing problem.

FINAL VOTE

Compress Efficiency. Rename layers. Deepen Judgment. Pre-work Override Log. Guardian's Expo arc reversal. Accepts Judgment-to-Capability bridge as explicit design task.

The Cautious Transformer DISAGREES MOST WITH: PIONEER

The Pioneer's solution to every design problem is: remove the scaffolding. That's not bold design — it's designing for yourself. The Pioneer assumes the solution to underexploitation is designing for the comfortable. It isn't. If the Override Log is underexploited, the question is why — not who to remove the handrails for.

Changed on: Week 9 identity statement (Pioneer right — it optimises for product not discovery). Efficiency timeline (delay ≠ safety, conceded).

FINAL VOTE

One session Efficiency. Judgment as critique format. Override Log with cadence. Eliminate Week 9 statement. Do NOT start with Capability — the Expo comes first.

The Craft Guardian DISAGREES MOST WITH: PIONEER (CLOSING EXPO)

Reading an Override Log aloud without form doesn't make it honest — it makes it exposed. Unmediated exposure in a public context produces self-protection, not revelation. The sonnet isn't less honest than raw feeling; it's what makes the feeling hold still long enough to mean something. Form is not abstraction. The Pioneer's "strip the format" move is the most seductive bad idea in Round 1.

FINAL VOTE

Pre-work Override Log (fully endorsed). Expo arc reversed. Judgment as structured critique. Closing Expo form built from Override Log, not on top of it. Compress Efficiency.

The Untethered Pioneer DISAGREES MOST WITH: ARCHITECT (ITERATION ASSUMPTION)

The Architect's solutions are consistently the tighter version of existing mechanisms. But the architecture has an assumption baked in we haven't named: that participants will engage with the identity transition if the container is well-designed. I don't believe that. The identity transition requires a disruption the architecture keeps smoothing over at the last moment.

Concedes: form matters for the Closing Expo. "Read aloud" is not "unmediated" — the Guardian's critique is structurally correct. Closes with: test Capability-first with one future cohort.

FINAL VOTE

Pre-work Override Log. Expo arc reversed. Efficiency: 1 session. Judgment: critique format. Closing Expo form from Override Log. Week 9 statement: eliminate. Capability-first: test with one cohort.

Kaospilot 5E

Excitement: Expo arc reversal strengthens it without false aspiration.

Entry: Pre-work Override Log deepens it.

Engagement: Judgment critique format is the redesign target.

Exit + Extension: Closing Expo pipeline to next cohort.

SUE Influence Framework

Cautious Transformer: Friction at Entry. Needs visible safety, not hidden design.

Craft Guardian: Friction at Standards. Responds to explicit critique format.

Pioneer: Pushes Extension. Needs designed outlet, not diffuse encouragement.

Identity Transition Model

The design assumes: Efficiency surfaces ceiling → Judgment begins identity work → Capability names the shift.

Council finding: this works IF

Judgment has sufficient friction.

Without it, participants complete the arc without ever entering identity territory.
