

SCAMPER Design Council — Vote Tracker

Session: L&D Shakers AI Cluster Architecture Review
Date: 2026-03-24
Format: 7-lens SCAMPER + Round 2 Full Rebuttal

Vote Summary: Round 1 → Final

Advisor	Round 1 Stance	Final Vote	Changed?	Driver of Change
The Architect	Compress Efficiency; rename layers; deepen Judgment; pre-work Override Log	Same + accepts Judgment-to-Capability gap is real	Partial	Cautious Transformer's structural observation about missing bridge
The Cautious Transformer	Keep Efficiency 2-week; keep Week 9 identity statement; resist pre-Expo log	Compress Efficiency to 1 session; eliminate Week 9 statement	Yes	Pioneer's "earned the right" critique; Architect's safety-vs-delay distinction
The Craft Guardian	Rename layers; shrink Expo scope; critique format for Judgment	Adds: Judgment-to-Capability gap is real; fully endorses pre-work log	Partial	Transformer's structural observation confirmed by Architect
The Untethered Pioneer	Start with Capability; raw Override Log at Closing Expo	Concedes form matters for Expo; testing Capability-first vs. default	Partial	Guardian's argument that form is not abstraction

Consensus Points (All Four Voices)

- Judgment layer is the architecture's hinge** — it is under-designed and every other disagreement is downstream of whether Judgment does its job.
- Efficiency compressed to one session** — two weeks is convention, not conviction. This is the lowest-friction change.
- Pre-work Override Log before the Opening Expo** — seven days, one prompt, unframed. Converts participants from audience to analysts.
- Opening Expo arc reversed** — lead with struggle before success, not destination. Costs nothing. Changes everything about how the ceiling lands.
- Vocabulary change: rename layers** — "Surface Work / Standard Work / Original Work" replaces "Efficiency / Judgment / Capability." "Efficiency" is a management word that validates what participants came to move past.

Contested (Not Resolved)

TENSION	POSITIONS	STATUS
Start with Capability vs. Expo-first	Pioneer vs. Architect + Transformer	Unresolved — Pioneer proposes testing with one cohort
Closing Expo form vs. raw Override Log	Pioneer vs. Guardian	Partially resolved — Pioneer concedes form matters; Guardian accepts Override Log as source material
Week 9 identity statement	Architect/Pioneer (eliminate) vs. Transformer (keep)	Resolved — 3/4 vote to eliminate
Override Log as practice vs. artifact	Pioneer (daily discipline) vs. Transformer (homework risk)	Stress point — no design decision made

Arguments by Lens

S — Substitute

- **Architect:** Rename deep dive "layers" to "lenses" — identity oscillates, doesn't graduate
- **Transformer:** Needs the sequence/layers as map to belonging
- **Guardian:** Substitute vocabulary — "Surface/Standard/Original Work"
- **Pioneer:** Override Log needs to become a discipline with cadence, not a passive artifact

Decision on table: Rename layers (unanimous after Round 2). Override Log cadence = stress point.

C — Combine

- **Architect:** Pair Week 1 Expo and Week 9 explicitly — participants write back to what they saw
- **Guardian:** Two Expos are structurally redundant without explicit contrast
- **Pioneer:** Strip Closing Expo format — make it the Override Log, read aloud

Decision on table: Closing Expo form built *from* Override Log, not *on top of* it. Week 9 reads back to Week 1.

A — Adapt

- **Architect:** Medical residency — practitioner-in-residence reviews Override Logs
- **Transformer:** Executive coaching — continuity of history across sessions
- **Guardian:** Design critique — structured public critique with explicit standards for Judgment layer
- **Pioneer:** Documentary filmmaking — outside reader reviews Override Log cold

Decision on table: Judgment layer redesigned as structured critique. "Rigor of reflection" as explicit standard.

M — Modify

- **Architect:** Week 9 under-weighted; front-load identity work
- **Transformer:** Shrink Capability to one week; add consolidation week
- **Guardian:** Shrink Opening Expo to do ONE thing
- **Pioneer:** Fewer sessions, longer gaps, more explicit design of what happens between

Decision on table: Expo shrunk to one job. Judgment deepened before anything else is modified.

P — Put to Other Uses

- **Architect:** Opening Expo as cohort diagnostic tool
- **Transformer:** Override Log as peer accountability mechanism
- **Guardian:** Closing Expo as pipeline to next cohort's Opening Expo
- **Pioneer:** Build in Public documentation as case library

Decision on table: Closing-to-Opening pipeline is the one to activate first. Diagnostic use of Expo requires careful implementation.

E — Eliminate

- **Architect:** Two-week Efficiency timeline → compress to one session
- **Transformer:** Do NOT eliminate Efficiency
- **Guardian:** Eliminate the word "cluster"
- **Pioneer:** Eliminate Week 9 identity statement as standalone deliverable

Decision on table: Both Efficiency compression and Week 9 statement elimination move to implementation. Naming review warranted.

R — Reverse/Rearrange

- **Architect:** Pre-work Override Log before the Opening Expo
- **Transformer:** Against — creates anxiety without framing
- **Guardian:** Reverse Expo narrative arc — struggle before success
- **Pioneer:** Reverse full arc — start with Capability in Week 1

Decision on table: Pre-work log (Architect) + narrative arc reversal (Guardian) both implement. Full arc reversal (Pioneer) = one cohort test.

Biggest Fights

1. Protection vs. Disruption (Transformer vs. Pioneer — every lens)

The Transformer interpreted every design friction as a safety gap. The Pioneer interpreted every safety mechanism as a design compromise. Neither fully resolved. The Architect's reframe ("safety-vs-delay, not safety-vs-no-safety") was the most useful intervention.

2. Form vs. Rawness (Guardian vs. Pioneer on Closing Expo)

Pioneer: presentation format protects people from saying the actual thing.

Guardian: form is what makes difficult content transmittable. Raw exposure produces self-protection, not revelation.

Partially resolved: Pioneer conceded "curated, staged, read aloud" is a form.

3. Structural iteration vs. disruption assumption (Pioneer vs. Architect)

The Architect's solutions were consistently: tighter version of existing mechanism. The Pioneer's challenge: the architecture assumes good design produces identity transition. It doesn't — disruption requires a different kind of jolt. Unresolved.

Sharpest Single Insight

"The Override Log is load-bearing and may not be carrying the weight the architecture assumes."
— Synthesis, S lens

This is the finding that everything else depends on. If the Override Log isn't functioning as a spine — if participants treat it as optional or episodic — the architecture's central mechanism isn't operating. Every other design decision is secondary to verifying this.

Relevant Decision Frameworks

Kaospilot 5E (Excitement → Entry → Engagement → Exit → Extension)

- Pre-work Override Log strengthens Entry
- Expo narrative reversal strengthens Excitement without false aspiration
- Judgment critique format deepens Engagement
- Closing Expo as Override Log pipeline strengthens Exit + Extension

SUE Influence Framework (behavioral personas)

- Cautious Transformer = friction point at Entry and Engagement; requires visible safety structure, not hidden design
- Craft Guardian = friction point at Standards application; responds to explicit critique format
- Pioneer = pushes Extension; needs a designed outlet rather than diffuse "go further" framing

Identity Transition Model (implicit in architecture)

- The design assumes: Efficiency surfaces the ceiling → Judgment begins the identity work → Capability names the shift
- The council found: this works IF Judgment has sufficient friction. Without it, participants can complete the arc without ever entering identity territory.

Signal Summary by Lens

LENS	SIGNAL	VERDICT
Substitute	Override Log as practice vs. artifact	STRESS POINT
Combine	Expo pairing + Closing Expo form	HOLDS
Adapt	Judgment layer as structured critique	REDESIGN
Modify	Judgment depth before all else	REDESIGN
Put to Other Uses	Closing-to-Opening pipeline	HOLDS
Eliminate	Efficiency compression + Week 9 statement	REDESIGN

LENS	SIGNAL	VERDICT
Reverse	Pre-work log + Expo arc	REDESIGN

4 REDESIGN / 2 HOLDS / 1 STRESS POINT

The architecture is sound in thesis. The implementation is more protective than the thesis requires.
